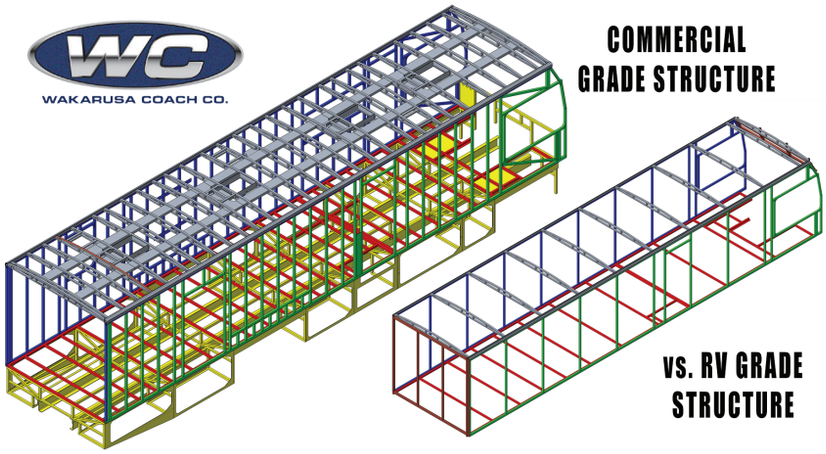
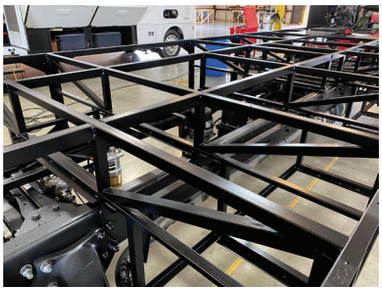
The Difference is In the Details!

In a day and age when companies are building on consumer grade vehicles that were designed for the RV market - including some who are purchasing used RV's and retrofitting them as mobile command and medical units - DON'T BE FOOLED by pretty bells and whistles! Do your research so that you end up partnering with a reputable company that has a long history of building true commercial-grade vehicles from the ground up so you can be confident that your mobile specialty vehicle will perform properly while providing years of carefree use. MSV/Wakarusa Coach is one of those rare companies that you can count on for maximum performance and increased value.



Every coach we build is engineered to perform in the most difficult environments and circumstances. CUSTOM DESIGNS - Our team of expert engineers will work with your staff to design the perfect custom coach for your specific purposes. There is a reason that MSV enjoys a high rate of return customers - because they are very satisfied! When it comes time for you consider your next mobile specialty vehicle, be sure to get a competitive quote from WC/MSV. We will hardly ever be the cheapest quote you receive, but when you "look under the hood", you will find that we represent the best value for your money.



More Steel in the Sub-Floor forming a Strong Foundation.

Strong Aluminum Roof Trusses Every 16" On Center.

3" Headers & Slide Openings Wall Studs 16" On Center.

Locomotive & Airplane Quality Huck Bolt Fasteners

In addition, each of our lower storage compartments are insulated and covered in fiberglass. Our ceilings only have one seam that runs the length of the coach, dramatically cutting down on seams. Our AC units feature offset vents to minimize noise in the patient areas, while our certified HEPA (High Efficiency Particulate Air) filtration systems keep the air free from unwanted germs and bacteria. Our commercial grade steps are designed to stand the test of time!
